

 CivilRegistra

**Digital Identity For All**

# Introduction

Civil Registra is a robust data enrolment software designed to enable and empower digital inclusion and accessibility to eligible citizens across Africa.

Civil Registra runs on a mobile operating system and is capable of capturing both textual and biometric data while ensuring internal standards for biometric data acquisition are adequately met.

Initially designed as an Android Enrolment Solution for Nigeria's digital identity scheme, Civil Registra empowered the Nigerian government to cover the majority of Nigerians previously hindered by location, unavailability and time. Using Civil Registra, licensed agents of the National Identity Management Commission could seamlessly and inexpensively enrol eligible citizens in urban or very remote areas nationwide into a central Database at any time without compromising on the quality of data acquired.

Civil Registra has now gone beyond the borders of Nigeria to power digital identity across Africa, for multiple use cases such as civil registration, Nation ID enrollment, voter registration or any form of biometric enrollment for citizens across the continent.

This product significantly curbs the peculiar challenges of nationwide enrollments across Africa by mitigating the high cost of a traditional enrollment setup, logistical issues, internet availability and infrastructural challenges.

# The need

In today's global economy, digital identity inclusion is one of the most critical and necessary ingredients to bring about accelerated development in Africa.

Yet about 1 billion people are officially unregistered with 81% living in Sub-Saharan Africa and Asia.

1.

28% of the population in low-income economies lack an officially-recognized identity

2.

45% of women in low-income countries lack a foundational ID, compared to 30% of men.

# Why Civil Registra?

Enabling digital identity is one thing - making it accessible for all in locations affected by low internet connectivity, logistical issues and slow digital adoption is a bigger challenge.

Civil Registra is the game-changer as the widespread adoption of mobile devices in Africa (estimated to be about 67% in 2025) presents a unique opportunity to enrol citizens with legal identity records that were previously impossible to provide or maintain.

With complete support for offline and online enrollment options, Civil Registra empowers Africa with the needed platform to capture data anywhere and anytime.

By leveraging mobile technology, Civil Registra streamlines any enrollment process, capturing high-quality data that meets compliance checks - ALL at the fraction of the cost of physical registration.

Within one year of operation, the system enrolled over 4 million Nigerians and legal residents into the country's digital identity database and is now currently being used by over 16,000 Mobile devices in Nigeria's enrollment ecosystem.

*Civil Registra is the most suitable way for African governments to facilitate Digital Identity Inclusion for every eligible citizen.*

# Benefits of Using Civil Registra

- Curb double registration and fraud with Pre-enrollment checks and mechanisms such as liveness detection.
- Increase digital identity efforts through Multiple enrollment service options (by agents or self-service)
- Low Set-Up Cost Compared to other enrolment systems, Civil Registra is cheaper both in setup and maintenance.
- Seamless and High-Quality Mobile Capture: Civil Registra enrolls citizens faster, enabling agents to empower millions of Nigerians anywhere with national identification using high-quality fingerprint capture and image output quality.
- Secure Mobile Enrollment for All: Enrolment agents never have to worry about compromising health compliance regulations as biometric capture can be done from a safe distance while enrollee data is securely captured onto the client's servers.
- Ensure GDPR Compliance and total data security as the solution is designed to mitigate against identity fraud and impersonations while adhering to data privacy rules.

# Enrollment Use Cases and Capabilities

Civil Registration  
(Adult & Child)

Birth  
Registration

Death  
Registration

Data Modification  
/Update

Unique ID  
number Retrieval  
and Slip Issuance

Card Replacement  
or Renewal

# Features for Complete Mobile Enrollment

Civil Registra has the required quality that agencies need to capture biometric data and enrol anyone in minutes from anywhere in the world. From an Automatic GPS Locator, Geolocation Features, and Fingerprint Validation to Liveness Detection and Slip Printing along with other features.

- Front-end solution for civil registration which supports Android OS, Windows, and Web Enrollment.
- Robust device and operations management Portal.
- Multi-biometric acquisition options, fingerprints (contact and contactless) Face, Iris etc.
- Client-based validation options in-line with international standards.
- Offline and Online Enrollment Options are available.
- Geofencing and Geolocation features
- Robust analytics and data insights from client activities and heartbeat information.

- Robust security at multiple layers(at rest, in memory & in transit)
- Document Collection and Management
- Slip printing and multi-purpose card production
- Supports value-added services such as user-verification services

# Conclusion

For advancing governments, there is strong a need to develop a strategic roadmap for digital identification for her citizens; one that encompasses key areas from population census to personal and financial identification and developmental planning.

Civil Registra is the number one mobile enrollment solution you need today to implement a nationwide digital identification scheme securely and at a cost-effective price.

Identity is a right and not a privilege - choose Civil Registra to make essential services available for every eligible citizen.
