SEAMFIX CARE

The Single Orchestrated platform that Empowers Workers with Digital Health Records for Total Safety Compliance.

Why Seamfix Care?

OHS (Occupational Health & Safety) standards are created to help protect workers from being physically or mentally injured while on the job.

Yet, a problem exists with the current system.

Due to the mobility of workers, there is no easy way for OH service providers to store and aggregate their individual records as they navigate their careers through multiple companies and locations.

This makes it hard for contractors and site workers to spot a negative trend in any of their key health attributes - leading to potential workplace illnesses, costly lawsuits, compliance fines, and reduced productivity.

On the other hand, workers are left at the short end of the ecosystem with no way to digitally store, share & control their safety-critical records.

Seamfix Care is the game-changer in an industry moving towards transformation.

Innovative Occupational Safety Powered by SeamCred Engine

With a core system called *SeamCredEngine,* we provide a mechanism for biometric issuance, digital credential management and verification using blockchain technology.

How does this help you?

- We create a continuous Occupational Health Record for each individual worker that allows multiple stakeholders in the ecosystem to view the compliance data all at a glance.

- This health record would sit alongside other key worker attributes like competencies, insurances, licenses, timesheets etc to collectively create a one-stop-shop for everything a worker may need to be compliant in the industry. This will help companies place workers on projects and sites without incurring any HSE fines.

- Secure and Accessible - the records can be delivered via a combination of a web portal and app, with integrations into other industry critical tools.

- This automated process now empowers Fit-for-task workers with the right medical information throughout their careers with full data support for both Health Assessments and Health Surveillance tests.

The Holistic Experience from Safety Worker - Company - Healthcare

Full Surveillance:

Easily monitor the occupational health status and fitness of your employees throughout their time on the project site.

Integrated Analytics:

Reduce operating costs and improve productivity through routine admin and data-driven insights from your dashboard.

Compliance on the Go:

Stay updated and keep your workplace secure no matter the changes to H+S regulations.

Digitized OH Services:

Save time through automated processing of medical certificates for your safety-critical workers.

Centralized and Accessible:

Empower your employees with a platform for individual health records throughout their career journey.

SEAMFIX
Care

Built with Defining Features for the Progressive User.

- Core Biometric Capabilities like Face ID to drive secure worker Identification

- Blockchain Technology with APIs to create digital health certificates and store data.

- Web Portal and Mobile Application for total accessibility

- Integrated Cloud Platform to pull critical business data from other sources

- Alerts and Notifications Engine for Key Reminders

Digital Transformation
for a Better World

In the construction industry alone, about

2.5 million

workers are classified as doing work that requires continuous health assessment including safety-critical medicals

By digitizing all of the services delivered by different OHSPs, we create all of the certificates that are required within a particular industry and feed the entire ecosystem with the compliance data that is required to assure that workers are fit-for-task.

Seamfix care is the super-connector for multiple industries, providing the tools and services that'll enable the world to optimize employees' physical and mental wellbeing and help them thrive in the workplace.

Get started today to build the most secure workplace for optimal staff performance.
